BERRY ROCK HOMES

FOR REALTOR PARTNERS

Inspection Process

Berry Rock Homes aims for a smooth, collaborative inspection process that sets our clients up for success. Every inspection must be coordinated with both the client and our company within the inspection period. We focus on five major items that must be in good working order: **roof, foundation, plumbing, HVAC and electric.**

We may also request other repairs if necessary. During the home search with approved clients, pay close attention to these items on the seller's disclosure. Our clients are responsible for repairs and maintenance, so we want the "big ticket" items in good condition before closing.

Process & responsibilities

01	Berry Rock Homes team orders the inspection
02	Inspector will reach out to Realtor to schedule the inspection
03	Report will be sent to Realtor and Berry Rock Homes
04	Realtor partner reviews inspection report with client and compiles a list of items the client wants to have fixed
05	Realtor must contact Berry Rock Homes within inspection period to get the inspection requirements from our company as well as coordinate inspection requirements from the client
06	Once Realtor has combined the client and company concerns, send the inspection resolution to **contracts@berryrockhomes.com** for signatures and list the signor as Cameron Rock, Manager
07	Please correspond with our client and company about any response from the seller during this process so we can collaboratively work through the inspection period to satisfy all parties
